

**Develop a python script
Publish Data to the IBM Cloud**

Date	04 November 2022
Team ID	PNT2022TMID24697
Project Name	SMART WASTE MANAGEMENT SYSTEM FOR METROPOLITIAN CITIES
Maximum Marks	4 Marks

**SMART WASTE MANAGEMENT SYSTEM FOR
METROPOLITIAN CITIES**

The screenshot shows a Python script in a text editor and its execution in a Python 3.6.5 Shell. The script is designed to publish random data to an MQTT broker.

```
#Through python coding we are going to access the subscriber
import paho.mqtt.client as paho
import time
import random

def on_publish(client, userdata, mid):
    print("Publish the data ")

client = paho.Client()
client.on_publish = on_publish
client.connect("broker.mqttdashboard.com", 1883)
client.loop_start()
while True:
    temp = random.randint(1,30)
    (re,mid) = client.publish("iottopic",str(temp),qos=1)
    print(temp)
    time.sleep(10)
```

The shell output shows the successful execution of the script, displaying the temperature values published:

```
Python 3.6.5 (v3.6.5:f59c0932b4, Mar 28 2018, 17:00:18) [MS
C v.1900 64 bit (AMD64)] on win32

The screenshot shows a Python script in a text editor and its execution in a Python 3.6.5 Shell. The script is designed to subscribe to an MQTT broker and print the received data.

```
import paho.mqtt.client as paho
def on_subscribe(client,userdata,mid,grated_qos):
    print("subscriber:" + str(mid)+str(granted_qos))

def on_message(client,userdata,msg):
    print(msg.topic + "" + str(msg.qos) + "" + str(msg.payload))

client = paho.Client()
client.on_subscribe = on_subscribe
client.on_message = on_message
client.connect("broker.mqttdashboard.com", 1883)
client.subscribe("iottopic",qos=1)
client.loop_forever()
```

The shell output shows the successful execution of the script, displaying the received data:

```
Publish the data
